

DoubleA-Cap®

Pure and clean quality.

World-class closure cap for infusion containers manufactured using the BFS process

The DoubleA-Cap® is produced in qualified clean rooms class GMP D. The caps for BFS (Blow-Fill-Seal) applications are made of approved medical grade materials and comply with the DIN EN ISO 15759 and DIN EN ISO 8871-5 standards.

Convincing features

- Suitable for all IV containers with standard EuroHead
- Available for both PP and PE containers
- Cap is oriented on bottle
- Compatibility with existing filling and capping lines
- Material usage lower than in existing products
- Two separate, equivalent ports for IV-sets and cannulas
- Each port can be easily and individually opened while the other remains sealed and germ-free
- Safe and convenient access: low penetration and high retention force
- Excellent sealing and resealing properties
- Cap and elastomer seals are inseparably combined inside the cap preventing a secondary leak-path around the seals
- Low coring and fragmentation during spike and needle insertion
